## CORE EXPERTISE

### ML & Forecasting

Time-series forecasting  
scikit-learn XGBoost  
Propensity models  
Experimentation

### Deep Learning & LLMs

PyTorch TensorFlow / Keras  
Transformers RAG LangChain  
OpenAI API RLHF / DPO  
LoRA / PEFT

### Data Platform & Cloud

Databricks Azure Python  
SQL Docker Git / CI Power BI  
Dash / Plotly

### Leadership

Data product ownership  
Stakeholder alignment  
Roadmap & delivery  
Cross-functional teams

## EDUCATION

### MSc Informatics & Multimedia

Technological Educational Institute of Crete  
2014 – 2016

### BSc Informatics Engineering

Technological Educational Institute of Crete  
2007 – 2014

## LANGUAGES

Greek Native  
English Fluent  
French Professional

# Alexandros Frangiadoulis

## Senior Data Scientist · Applied AI & Data Product Lead

Senior Data Scientist and Data Product Owner with 8+ years delivering production ML across luxury retail and aerospace. I lead end-to-end delivery of forecasting platforms, propensity models and LLM-powered analytics on Databricks/Azure and align engineering, analytics and commercial stakeholders around a shared roadmap. Seeking a lead role to build and grow a team that turns operational data into measurable commercial decisions.

## EXPERIENCE

### Breitling

Sep 2022 – Present

Senior Data Scientist & Data Product Owner · Zürich, Switzerland

- Own the global demand forecasting platform end to end (Databricks, Azure), from data model and pipelines to CI, monitoring and stakeholder adoption.
- Act as Data Product Owner: define the analytics roadmap, prioritise the backlog and align engineering, analytics and commercial teams on delivery.
- Design scalable pipelines that turn commercial and inventory data into planning signals used by supply and sales leadership.
- Build customer propensity and behavioural models that drive CRM targeting and revenue performance.
- Established boutique and vendor scoring frameworks across markets and deliver executive dashboards on sales dynamics, media performance and core KPIs.

### AKKA Technologies

Jan 2018 – Aug 2022

Data Scientist & Software Engineer · France, embedded in Airbus engineering programmes

- Delivered applied ML solutions inside Airbus engineering programmes, from prototype to operational tooling.
- Implemented transformer-based NLP models for large-scale maintenance-ticket classification.
- Built deep learning architectures to detect and classify aircraft manoeuvres from flight data.
- Reduced engineering cycle time by replacing parts of simulation workflows with predictive models.
- Developed ML prototypes and dashboards supporting operational decision-making.

### European Chemicals Agency

Mar 2017 – Aug 2017

R&D Engineer · Helsinki, Finland

- Built internal technical tools for audiovisual and communications teams; coordinated technology for high-profile multilingual events.

### iSTLab – Technological Institute of Crete

Oct 2015 – Jan 2017

R&D Engineer · Greece

- Applied ML research; designed and evaluated models for experimental and research-driven applications, leading to a peer-reviewed publication.

### Egnatia Tel Group of Companies

Jun 2015 – Aug 2015

IT Support · Greece

- Supported IT systems and operational coordination for construction projects.

## SELECTED PROJECTS

- Production Demand Forecasting Pipeline with LLM Insights** — end-to-end forecasting pipeline in production; an LLM layer serves results as interactive Plotly visuals and generates market-level suggestions on the demand forecast for commercial and planning teams.
- Client Classification Insights** — segmentation and classification models over customer behaviour, surfacing actionable client profiles for CRM targeting and boutique strategy.
- Media Spend Impact Analysis** — measured the effect of media investment on sales and demand, giving marketing leadership evidence for budget allocation across channels and markets.

## PUBLICATIONS

**Deep Learning Implementation Model for Image Recognition Applications** — International Symposium on Ambient Intelligence and Embedded Systems, Sep 2016.
